Quick Start

1. Remove the scoop & basket and hand wash them with warm soap and water.
IMPORTANT! WASH THE WATER TANK WITH WARM WATER ONLY. DO NOT USE SOAP!

2. Plug in The Aspen. A standard household outlet is what you need.
IMPORTANT! KEEP THE ASPEN AT LEAST 6" FROM THE WALL & OUT OF DIRECT SUN.

3. Open the cover and put the basket back in. Select the ice size you want from the control panel.

4. Add clean fresh water to the tank. Keep it below the fill level.
Initial fill should be at least 1L (.26 Gal).

5. One simple press of a button starts making ice fast. The large viewing window makes it easy to monitor the ice making. Ice is ready in 6-8 minutes.

6. Enjoy fresh ice and chill. Remember, The Aspen will stop making ice when the basket gets full or it runs low on water.

Please refer to the included manual for detailed use, maintenance, safety, and care instructions for The Aspen ice maker.
