

ONKYO® SERVICE MANUAL

DIGITAL AUDIO TAPE DECK MODEL DT-901

Black model

BHUDN, BHUD	120V AC, 60Hz
BHUP	230V AC, 50Hz
BHUW	120V/ 220V AC, 50/60Hz
BHUQA	240V AC, 50Hz

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK Δ ON THE SCHEMATIC DIAGRAM AND IN THE PARTS LIST ARE CRITICAL FOR RISK OF FIRE AND ELECTRIC SHOCK. REPLACE THESE COMPONENTS WITH ONKYO PARTS WHOSE PARTS NUMBERS APPEAR AS SHOWN IN THIS MANUAL.

MAKE LEAKAGE-CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

ONKYO
AUDIO COMPONENTS

SPECIFICATIONS

Signal Format

Tape Recording System:
Sampling Frequencies:

Rotating head system DAT

Recording: 48kHz, 44.1kHz, 32kHz (automatic digital input switching)

Playback: 48kHz, 44.1kHz, 32kHz (automatic switching)

Number of Quantization Bits:

16-bit linear

Number of channels:

2-channel (stereo)

Audio (Analog recording and playback)

Frequency Response:

2Hz — 22,000Hz

Dynamic Range:

90dB or more

S/N Ratio:

90dB or more

Total Harmonic Distortion:

0.005% or lower

Wow & Flutter:

Unmeasurable

Input/Output jacks

Analog Input jacks

Lowest Input Level:

450mV

Input Impedance:

20k ohms

Analog Output jacks

Full-Scale Output Level:

2V

Output Impedance:

600 ohms

Headphone Output:

Max. 45mW + 45mW/32 ohms (most suitable impedance is 8 to 600 ohms)

Digital Input Jacks:

Coaxial/75 ohms, Optical (switch equipped)

Digital Output:

Optical

Mechanism

Head:

Amorphous/ferrite composite

Cylinder Diameter:

30mm, 1-3/16"

Cylinder Rotational Speed:

2000 r.p.m. (during recording and playback)

Tape Speed:

8.15mm (5/16") /sec., 12.225mm (1/2") /sec. (automatic switching)

Search Speed:

Max. 400 times normal

High-Speed Rewind Time:

About 27 seconds (120 minute tape)

General

Power Consumption:

25W

External Dimensions:

455 (W) × 130 (H) × 371 (D) mm

Weight:

17-15/16" (W) × 5-1/8" (H) × 14-11/16" (D)
7.2Kg, 15.9 lbs.

Specifications and external appearance are subject to change without notice because of product improvements.

INSTALLATION

Avoid locations nearby tuners or television sets.

Since this unit uses high-frequency signals, placing it near a tuner or television set may result in interference with the tuner/TV reception. If this kind of audio or video interference is experienced, move the DAT unit away from other AV components.

The some kind of phenomenon may occur when using an indoor TV antenna; whenever possible, use an outdoor antenna instead.

Precautions when using an indoor wire-strip antenna (T-antenna) with FM tuner.

Separate the horizontal elements of the FM antenna at least 1.5 cm from the tuner.

Do not allow the feeder wire from an indoor or outdoor FM antenna to drape near the DAT unit. If excess feeder wire is present inside the room, coil it up as far as possible away from the DAT unit.

SAFETY PRECAUTION (This "safety precautions" is applied only in U.S.A.)

1. Before servicing, unplug the power cord to prevent an electric shock.
2. When replacing parts, use only manufacturer's recommended components for safety.
3. Check the condition of the power cord. Replace if wear or damage is evident.
4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
5. Before returning the serviced equipment to the customer, be sure to make the following insulation resistance test to prevent the customer from being exposed to a shock hazard.

• INSULATION RESISTANCE TEST

1. Unplug the power cord and short the two prongs of the plug with a jumper wire.
2. Turn on the power switch.
3. Measure the resistance value with ohmmeter between the jumpered AC plug and each exposed metal cabinet part, such as control shafts, handle brackets, etc. Equipment without antenna terminals should read approximately infinity to all exposed parts.

Resistance = Approx ∞

4. If the measurement is outside the specified limits, there is a possibility of a shock hazard. The equipment should be repaired and rechecked before it is returned to the customer.

SERVICE GUIDE

1. Voltage Selector (Rear Panel)

Worldwide models are equipped with a voltage selector to conform with local power supplies. Be sure to set this switch to match the power supply in your area before turning the power switch on. Voltage is changed by sliding the groove in the switch with a screwdriver to the right or left. Confirm that the switch has been moved all the way to the right or left before turning the power switch on. Models without a voltage selector can only be used in areas where the power supply voltage is the same as that of the unit.

2. Dew (moisture condensation)

If the deck is moved from a cold environment to a warm one, condensation may form on the rotary head. In these circumstances, tape may adhere to the head, causing possible damage to the tape and/or the head. To prevent this happening, the unit is provided with a moisture sensor. If condensation has formed on the head, the sensor will detect this, and the **[DEW]** symbol will flash on the display.

If this **[DEW]** symbol is flashing on the display, eject the tape and remove it. Leave the power on for about one hour, until the **[DEW]** symbol is no longer shown on the display.

3. Cleaning the rotary heads

Dust or dirt on the rotary heads (the parts that touch the tape) can cause lower quality recording or playback. This unit is equipped with a cleaning indicator that flashes when dirt is detected on the heads. A dirty or damaged cassette might also cause this indicator to flash. When the indicator flashes, play another cassette. If the indicator does not go out after a minute or two, clean the heads with a special DAT cleaning tape (optional).

CLEANING indicator

- After using the cleaning tape, if playback quality has improved but becomes worse after a few playings, it could be that the cassette tape is old. In this case, use a new cassette tape.
- If sound quality doesn't improve even after using the cleaning tape, consult with your dealer.
- The cleaning tape cannot be used for recording or playback. (Please read the instructions that come with the cleaning tape.)

Cleaning this unit

(For safety, unplug the power plug.)

Clean the cabinet with a soft cloth. If it is very dirty, use a soft cloth slightly moistened with a weak soap solution, and wipe with a dry soft cloth.

TERMINAL FUNCTION OF IC'S

• IC101 (AN7030SE2): RF AMP.

Pin No.	Mark	I/O Division	Function
1	V _{CC} 1	I	Power supply terminal
2	ACH FB	O	Playback feed back signal (Ach)
3	ACH IN	I	Playback amp. signal (Ach)
4	GND 1	—	GND terminal
5	BCH IN	I	Playback amp. signal (Bch)
6	BCH FB	O	Playback feed back signal (Bch)
7	AREC PCM	I	RF recording level adj. terminal
8	AREC PLT		
9	AREC ATF		
10	BREC ATF		
11	BREC PLT		
12	BREC PCM		
13	REC CNT 1	I	Track pitch signal

16	TP 5		
17	TP 6		
18	TP 7	I	PLL off-set/data effective flag terminal
19	TP 8	I	Not used, connected to power supply
20	MOS	I	Serial port/strobe signal
21	TST	I	Test mode terminal (Normal, connected to GND)
22	ENC	—	Connected to GND terminal
23	NC	—	Not connection
24	NC		
25	V _{DD}	I	Power supply terminal
26	NC	—	Not connection
27	RSW	—	Not used, open
28	HAS	O	A/D input select signal
29	AVM	—	Not used, connected to GND
30	VLP	—	Not used, open
31	STM	I	R3TU or RLFGT (64 P/R) signal
32	STR	I	Comparator reference signal of STM input

Pin No.	Mark	I/O Division	Function
33	CAE	O	Capstan velocity control signal
34	CYE	O	Cylinder velocity control signal
35	END	I	VREF or ATFTER voltage signal
36	VSX	I	CYLP $\overline{\text{PG}}$ signal
37	ASH 1	I	Capstan FG or RLFGT signal after EXOR
38	NC	—	Not connection
39	AFB 1	O	Inverter amp. signal of ATFTER input (Not used, open)
40	NC	—	Not connection
41	AFG 1	I	ATF tracking error voltage terminal
42	ASH 2	O	Not used, connected to GND
43	AFB 2	O	Not used, open
44	NC	—	Not connection
45	AFG 2	I	Reference voltage terminal
46	VDA	I	Power supply terminal
47	VSA	—	GND terminal
48	ORE	O	Reference voltage terminal
49	IRE	I	
50	GND	—	GND terminal
51	IPL	O	Not used, open
52	NC	—	Not connection
53	CLP	I	Not used, connected to GND
54	CP 1	O	Not used, open
55	CP 2	I	Supply reel FG signal
56	NC	—	Not connection
57	NC		
58	CN 1	O	Not used, open
59	CN 2	I	Not used, connected to GND
60	CTL	O	Not used, open
61	PFG	I	Cylinder FG signal
62	PGM	I	Not used, connected to GND
63	CUL	O	Capstan rotative direction signal
64	NC	—	Not connection

• IC102 (AN7035SCE2): Playback PLL

Pin No.	Mark	I/O Division	Function
1	LPF	O	Buffer amp. 1 reference terminal
2	GND 1	—	GND terminal
3	ENVC	O	ENV time constant setting terminal
4	ENVR	I	ENV threshold voltage adj. terminal
5	RSENV	O	RF envelope signal
6	RSENV	O	RSENV time constant setting terminal
7	RSRF	I	RF signal
8	DELOUT	O	RF signal
9	DELIN 1	I	Delay (45°) signal
10	DELIN 2	I	Delay (90°) signal
11	PDOUT	O	Phase comparator signal
12	VREF 1	I	V/I converter reference voltage terminal
13	VCOV	I	OSC frequency control terminal
14	R/P	I	Recording/playback select terminal (Not used, connected to GND)
15	VCOR	I	OSC frequency adj. terminal

Pin No.	Mark	I/O Division	Function
16	V _{CC} 1	I	Power supply terminal
17	VCOC 1	O	VCO terminal
18	VCOC 2	O	VCO terminal
19	V _{CC} 2	I	Power supply terminal
20	PLL CP 1	O	Clock (2CK) signal (Not used, open)
21	PLL CP 2	O	Clock (CK) signal
22	DEMCOD	O	NRZI demodulated signal for playback signal with PLL
23	SVSYNC	O	ATF sync. signal
24	GND 2	—	GND terminal
25	OP OUT 3	O	ATF 3 signal
26	OP IN 3	I	ATF 3 signal
27	OP OUT 2	O	ATF 2 signal
28	OP IN 2	I	ATF 2 signal
29	OP OUT 1	O	ATF 1 signal
30	OP IN 1	I	ATF 1 signal
31	VREF 2	I	Reference voltage terminal
32	COMP 1	I	Output amp. 1 (+) signal

50	CUE/REV	O	Sound quality output when CUE/REVIEW				

● Q553(SAA7350): D/A converter

Pin No.	Mark	Function
1	XSEL	Crystal frequency select. This pin is used to select the master crystal frequency as follows:-XSEL HIGH=384fs XSEL LOW=256fs This pin defaults to XSEL HIGH when not connected.
2	DOEN	One-bit Digital Output Enable. When LOW, the one-bit code outputs are made available for DAC7. (not used.)
3	IDF3	Input data format. These three pins determine the input format the device is to operate in. If unconnected these pins will default HIGH (i.e. burst clock mode).
4	IDF2	
5	IDF1	
6	TEST4	This pin should be left open circuit.
7	SDI2	Serial Data Input. Used in simultaneous mode only (for the right channel signal). When not used, this pin will be internally pulled high.
8	SDI1	Serial Data Input. This should be a 16, 18 or 20-bit linear 2's complement PCM signal. In simultaneous mode this pin is used for the left channel signal.
9	WSI	Serial input Word Select Signal. Signifies whether data word is for the left or right channel. Can be either fs, 2fs, 4fs or 8fs where fs is the system sampling frequency. fs can lie between 16kHz and 53kHz.
10	SCKI	Bit clock input for the serial input interface.
11	TEST1	This pin should be left open circuit.
12	VDD	5V power supply for digital section.
13	VSS	Ground connection for the digital section.
14	XIN	Crystal Oscillator Input.
15	XOUT	Crystal Oscillator Output.
16	XSYS1	Buffered Oscillator Output.
17	TEST5	In normal operation this pin should be tied LOW.
18	VDDAR	Analogue 5V supply for right channel.
19	INTR+	Output from the right positive switched-capacitor integrator. Input to differential op-amp.
20	FBR+	Feedback connection for the right positive switched-capacitor integrator.
21	VSSAR	0V supply for right channel.
22	FBR-	Feedback connection for the right negative switched-capacitor integrator.
23	INTR-	Output from the right negative switched-capacitor integrator. Input to differential op-amp.
24	VRCR	High impedance voltage reference for the right channel inputs. Typically VDDAR/2.
25	VDACR	Reference voltage supply for right channel DAC's. Normally this will be connected to VSS.
26	VROR	Right channel voltage reference output. Typically VDDAR/2.
27	VDDATR	5V supply for right channel analogue timing.
28	VSSAT	0V supply for left and right channel analogue.
29	VDDATL	5V supply for left channel analogue timing.
30	IRR	24 kohm bias resistor connection for the reference current generator circuit.
31	VROL	Left channel voltage reference output. Typically VDDAL/2.
32	VDACL	Reference voltage supply for left channel DAC. Normally this will be connected to VSS.
33	VRCL	High impedance voltage reference for left channel inputs and for bias current generator. Typically VDDAL/2.
34	INTL-	Output from left negative switched capacitor integrated. Input to differential op-amp.
35	FBL-	Feedback connection for the left negative switched-capacitor integrator.
36	VSSAL	0V supply for left channel.
37	FBL+	Feedback connection for the left positive switched-capacitor integrator.
38	INTL+	Output from the left positive switched-capacitor integrator. Input to differential op-amp.
39	VDDAL	Analogue 5V supply for left channel.
40	TEST2	This pin should be left open circuit.
41	TEST3	This pin should be left open circuit.
42	DOL	Digital output left. Left channel one-bit code for DAC7, when disabled this pin will be driven LOW. (Not used.)
43	XSYS2	Output clock at a frequency of half the master clock frequency.
44	DOR	Digital output right. Right channel one-bit code for DAC7, when disabled this pin will be driven LOW. (not used.)

D/A converter

ABOUT THE ERROR RATE

If the error rate is normal, it can be judged that everything up to signal processing, meaning the operation of the RF head mechanism, is normal.

Thus, when there is a problem with playback, if the error is normal, it can be assumed that the origin of the problem is in the analog system.

ABOUT THE LEVEL METER

Just as for the error rate, if the level meter is operating normally, it indicates that the signal is reaching signal processing.

In other words, if there is no problem with the level meter during playback, it indicates that the head and the RF are outputting the signal.

In addition, if there is no problem with the level meter during recording, it indicates that the analog system (input amplifier and AD) is functioning normally.

ERROR DISPLAY AND PROBLEM LOCATION

Display procedure

Simultaneously press the counter mode key, the counter reset key, and the pause key. The various internal data will be indicated in the counter section of the fluorescent lamp display.

There are four types of data as shown below; the data indicated will change each time the counter mode key is pressed.

① Total error rate for head A and head B.	"A" and "B" will light up in the repeat indication of the fluorescent lamp display.
② Error rate for head A	"A" will light up in the repeat indication of the fluorescent lamp display.
③ Internal code for microcomputer processing	
④ Error codes for system control (left) and mechanism control (right) (Refer to the next page.)	"E" will light up in the farthest left digit of the counter.

To return to the normal display mode, press the counter reset key.

Note that the error codes will be cleared when the tray is opened.

ERROR CODE TABLE

Error code (Note. 1)	System control error code		Mechanism control error code	
	Processing (Note 2)	Contents	Processing (Note 2)	Contents
1	Test operation	R3CP clock malfunction	Unload	Mechanism mode switching lock
2	Test operation	HSW clock malfunction	Unload	Tape loading lock
3	Transmission omitted	Faulty transmission of the mechanism control	Unload	Capstan unlock
4	Unload	Still protection during operation	Unload	Cylinder unlock
5	Unload	Broken tape	Unload	Reel unlock
6	Unload	Faulty transmission of SP1	Unload	Sum of reel cycles cannot be measured.
7			Unload	In-cassette rewind time exceeded.
8			Unload	Slack tape-up time exceeded.
9			Unload	Tape jamming (Supply side)
A			Unload	Tape jamming (Take-up side)
B (-)			Unload	Gear does not engage.
C			Tray stop	Initial tray setting not possible.
O		—		No error
FF (blank)		No error		—

Note 1: Display mode

E	X1	X2
---	----	----

E: Indicates that mode is the error rate display mode.

X1: System control error code

X2: Mechanism control error code

Note 2: Processing when an error occurs

Test operation:

Internal clock of the system control temporarily connects for operation.

Transmission omitted:

Transmission processing stopped.

Unload:

Tape is unloaded.

DAT MAINTENANCE CHART

• DAT Head and Tape Transport Cleaning

Through normal usage of any tape machine, dirt and debris from the tape accumulates on the heads, which eventually causes performance problems. By using a cleaning cassette regularly, dirt buildup can be minimized, prolonging the life of the tape heads, and also keeping tape posts, tape guides, and the pinch roller clean.

• CLEANING

1. Play the cleaning cassette for 15-20 seconds.
2. Do not use the same part of the cleaning tape more than once.
3. Clean all tape contact surfaces, including the upper and lower drum, thoroughly with a soft cloth soaked in alcohol.
4. Clean both heads by gently rubbing in a horizontal direction, as depicted, using a head cleaning stick or a lint free cloth moistened with alcohol.
5. Wipe all tape contact surfaces, including upper and lower drum, with a dry soft cloth to ensure that all residual moisture is removed from the tape contact surfaces.

Note:

1. When cleaning the upper drum, hold it secure by the top edges with your finger tips.
2. Occasionally, dirt or debris may become lodged in the air bearing channels that are cut in the upper drum's surface. This can be removed by gently dislodging it with a sharpened toothpick.
3. The amount of solvent applied to the head drum should be used in moderation. Excess alcohol will dilute and remove the bearing lubricant in the capstan motor and rotary guides.

• MECHANISM CONTROLS AND FUNCTIONS

① LIGHT HOUSE TYPE RADIATION LED	Lighthouse-shaped, LEDs blink at start and end of tape.	②⑤ IDLER GEAR	Transmits movement to S and T reels in accordance with mode.
② CYLINDER	30mm in diameter, 40 FG pulses, maintains specified speed of 1000 to 3000 rpm.	②⑥ BT LEVER	Applies back tension to T reel during review.
③ T. POST ROLLER	Regulates tape travel position (upper edge).	②⑦ BT SPRING	Provides pressure for back tension lever.
④ T. INCLINED BASE (FIXED)	Regulates angle (90°) at which tape is wound around cylinder (stationary).	②⑧ S. BRAKE	Presses brake shoe against S reel base gear to perform braking.
⑤ T. STOPPER	Determines position of T post roller base during loading.	②⑨ S. REEL (SUPPLY SIDE)	Supply reel base, 64 FG pulses.
⑥ LOAD SW	Two-bit rotary switch, detects loading position.	③⑩ MODE MOTOR	6.5V DC motor, switches mode by forward and reverse revolution.
⑦ PINCH ROLLER	Presses against tape during play and review.	③⑪ TENSION SPRING	Provides back tension force of tension regulator.
⑧ T. FIXED POST	Regulates tape travel position.	③⑫ TENSION BAND	Mounted to tension regulator, applies back tension to S reel base.
⑨ CAPSTAN MOTOR	1.5mm in diameter, 290 FG pulses.	③⑬ TENSION ARM	Detects tape condition and applies back tension during play and review.
⑩ LOAD HOLDER	Contains loading drive gear and worm gear, engages and disengages M gear A.	③⑭ END DET. SENSOR	Light-receiving element for LED (detection at end of tape).
⑪ T. GUIDE ROLLER	Regulates tape travel position (top edge).	③⑮ DATUM PIN	Regulates width and height (left side) during loading of cassette tape.
⑫ DATUM PIN	Regulates width and height (right side) during loading of cassette tape.	③⑯ LID OPENER	Opens cassette lid during loading of tape.
⑬ GUIDE ARM STOPPER	Determines position of T guide roller base K during loading.	③⑰ S. GUIDE ROLLER	Regulates tape travel position (bottom edge).
⑭ LOAD SELECT LEVER	Switches engagement and disengagement of loading gear in accordance with loading conditions.	③⑱ S. FIXED POST	Regulates tape travel (bottom edge).
⑮ BEGIN DET. SENSOR	Light-receiving element for LED (detection at start of tape).	③⑲ S. POST ROLLER	Regulates tape travel position (top edge).
⑯ PINCH LEVER	Presses pinch roller against tape during play and review.	③⑳ S. STOPPER	Determines position of S post roller base during loading.
⑰ GUIDE LINK	Links T post roller base and guide roller base.	④① LOADING CAM	Uses movement transmitted from loading worm to move loading lever.
⑱ PINCH ARM	Comprised of pinch roller and T holding post, presses against the capstan.	④② LOADING WORM	Transmits movement of loading drive gear and loading cam.
⑲ PIN-PRESSURE LINK	Connected by the pin pressure spring and the pinch arm.	④③ LOAD DRIVE GEAR	Transmits movement of M gear A and loading worm, engages and disengages in accordance with mode.
⑳ T. REEL (TAKE UP SIDE)	Take-up reel base, 64 FG pulses.	④④ MR DET. ELEMENT	Detects magnetic changes (290 pulses) of flywheel.
㉑ CASSETTE SW	Detects cassette information (mistaken erasure, cassette detection).	④⑤ PINCH ROLLER SPRING	Mounted to the pinch arm, returns the pinch roller.
㉒ T. BRAKE	Presses brake gear against reel base gear to perform braking.	④⑥ LOAD GUIDE HOLDER	Holding cover of the loading arm and loading lever.
㉓ IDLER GUIDE	Holding cover for idler arm and S and T brakes.	④⑦ MODE GUIDE PLATE	Holding cover of the various gears, holds the plunger in position.
㉔ IDLER ARM	Moves left or right in accordance with mode condition, transmits movement of counter gear to S and T reels.	④⑧ BRAKE PLUNGER	5V, 200mA, switches brakes on and off in accordance with the mode.

• REMOVAL OF THE UPPER CYLINDER

Remove the loading unit
(Refer the page 30)

1. Remove the 2 screws (❶, ❷).

Caution: Please do not touch Hexagon screws.

2. Remove the cylinder (head) in the direction of the arrow.

Note: Do not touch the cylinder (head) with your bare hand; always be sure to wear a glove or other protection.

Be sure not to touch the head part.

* When reassembling the cylinder (head), be sure that the direction is correct. (If it is assembled in the wrong direction, the left and right channels will be reversed during recording and playback.)

• MECHANISM COMPONENT LAYOUT

• Top view

• Side view

• Bottom view

ADJUSTMENT PROCEDURES

• PREPARATION

- (1) Remove the top cover and the side panels.
- (2) Remove the front panel.
- (3) Remove the plate spring on the center of the front bracket.
- (4) Remove the four screws A and loosen the clumper C.
- (5) Remove the loading unit.

Note: Refer the preparation of page 34.

• ELECTRICAL ADJUSTMENT

• Adjustment points

Equipment and Tools

- 2-channel 30MHz oscilloscope (with external trigger and delay sweep) (with a 10 : 1 probe)
- Standard electrical tools and equipment
- Standard test tapes – RD-PG01 (PG reference), RD-ER01 (error rate)
- Blank tape for recording and playback (commercially available blank tape)
- Linearity adjusting tape: RD-LR02
- Post roller adjusting screwdriver: SZZV1102C
- Frequency counter

1. PLL Free Run Adjustment

1. Test equipment connection is shown in figure.
2. Power switch in "on" position.
3. Set the unit to cassette holder in "open" position.
4. Adjust **VR108** for $9.2 \pm 0.2 \text{ MHz}$ on frequency counter reading.

2. PG Phase Adjustment

1. Play the PG reference portion of the standard test tape (RD-PG01).
2. Set up the oscilloscope and connect as shown below.

	CH-1	CH-2
Test point	TP101 (RPRF)	TP301 (R3CP)
Volts/Div.	50mV	0.5V
Time/Div.	5msec.	
Delay	50μsec.	
Trig.	CH-2	
Mode	CHOP	
AC-GND-DC	AC	DC
Adjustment point	VR201	

Note: GND is the shield plate of the RF circuit.

3. After set up, the waveform shown on the right appears.
4. The waveform in the figure on the right is enlarged using the delayed sweep. The point where the delayed sweep is used to enlarge the waveform is the leading edge of the CH-2 (R3CP) waveform.

Delayed sweep – 50μsec.

5. Adjust **VR201** (located on the servo P.C.B.) so that the time "t" (in the figure below) from the leading edge of the waveform of CH-2 to the leading edge of the 522kHz waveform of CH-1 it is within $\pm 40 \mu\text{sec}$ of the time indicated on the label of the standard tape (e.g. 170μsec).

t: Value (μsec) indicated on the standard tape $\pm 40 \mu\text{sec}$.

3. ATF Gain Adjustment

1. Play the **error rate measurement** standard test tape (RD-ER01).
2. Set up the oscilloscope and connect as shown below.

	CH-1	CH-2
Test point	CN45 ③ (PILOT)	TP301 (R3CP)
Volts/Div.	50mV	0.5V
Time/Div.	5msec.	
Delay	0.1msec.	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	VR107	

3. Monitor about 8 lines of the ATF waveform. Select the line with the largest amplitude and enlarge it using the 50 μ sec. delayed sweep.
4. Adjust **VR107** so that the amplitude of the waveform is **1.4Vp-p** check that the other smaller amplitudes are **1.2Vp-p** or higher.

Standard value: $1.4 \pm 0.2\text{Vp-p}$

4. RF Recording Level Adjustment

1. Load a blank tape into the unit, place the unit in the REC-play mode, and make a blank signal recording for 10 to 15sec. Rewind the tape and play back the recorded portion.
2. Connect and set up the oscilloscope as follows:

	CH-1	CH-2
Test point	CN45 ③ (PILOT)	TP301 (R3CP)
Volts/Div.	50mV	0.5V
Time/Div.	2msec.	
Delay	0.2msec.	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	VR104: Head A, VR105: Head B	

3. While playing back the erased portion of the tape, verify that the signal amplitude falls in the range of **$1.4 \pm 0.2\text{Vp-p}$** .

Standard value: $1.4 \pm 0.2\text{Vp-p}$

4. If the signal amplitude is less than **1.2V**, turn **VR104** (head A) or **VR105** (head B) counter-clockwise until the amplitude falls into the specification. If it exceeds **1.4V**, turn the same variable resistors clockwise until the specification is met.
5. Repeat step 2 above again, then verify that the playback signal amplitude falls in the range specified in step 3. (Repeat step 2, 3 and 4 above until the specification is met.)

5. BOT/EOT Detection Sensitivity Verification and Adjustment

Remove the four screws B.
Remove the Mechanism ass'y.

1. Make sure that the tape stops with the leader portion (the beginning and ending portion).
- ※ If the tape does not stop at the leader, make adjustment by following procedure outlined below.
 - ① Insert a blank tape into the tape compartment of the set and press the playback button at the end of the tape.
 - ② Set up the oscilloscope and connect as shown below.

	CH-1	CH-2
Test point	CN54 ⑥ (BOT/EOT) ⑨ (magnetic substance)	CN58 ①
Volts/Div.	0.2V	0.2V
Time/Div.	2msec.	
Delay	—	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	VR271	

- ③ Adjust the amplitude of waveform to less than 1V at the magnetic substance and more than 4V at the leader on VR271.

6. Linearity Adjustment

Caution: The post rollers are used for linearity adjustment. Gradually change the post roller heights until the RF signal envelope becomes rectangular.

• DAT Linearity Adjustment

1. Load the linearity adjusting tape (RD-LR02) into the deck.
2. Connect and set up the oscilloscope as follows:

	CH-1	CH-2
Test point	CN45 ⑤ (PILOT)	TP301 (R3CP)
Volts/Div.	0.2V	2.0V
Time/Div.	Ⓐ 5msec. Ⓑ 1msec. Ⓒ 0.2msec.	
Delay	—	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	Post rollers	

3. Monitor the head "A" side of RF envelope waveform.

Note: When the waveform of TP301 (R3CP) is high, the envelope is output from the head "A".

4. While playing back the linearity adjusting tape, gradually adjust the **post roller** heights until the RF signal envelope ⑥ becomes rectangular.

■ If the loading unit is to be removed for adjustment, note the following.

(PREPARATIONS)

- (1) Remove the loading unit. (With the underside facing up.)
- (2) Open the cassette holder.
- (3) Move the slider opening/closing plate of the removed loading unit in the direction indicated by the arrow in Fig. 1, and hook it above the prong of the reinforcement plate.
Caution: The slider opening/closing plate will be deformed if it is left as is.
- (4) Place a tape with the slider lock released in the mechanism.
- (5) Switch on the power and check the loading operation.

SCHEMATIC DIAGRAM CONNECTION DIAGRAM

AUDIO SECTION

- NOTE**
- The components identified by mark **Δ** are critical for safety.
 - All diodes are equivalent to 1N4148 unless otherwise noted.
 - All resistors are in ohms 1/4 watts unless otherwise noted.
 - All capacitors are in pF 50V unless otherwise noted.
 - The thick lines in PC board are the printing side of the parts.
 - Circuit is subject to change for improvement.

Note

- \$702 Loading detection switch.
- \$703 Mode detection switch.
- \$751 Cassette tray open detection switch.
- \$752 Cassette tray close detection switch.
- All voltage values shown in circuitry are under no signal condition and playback mode with volume control at minimum position otherwise specified.
- For measurements see EVM.
- Important safety notice

Components identified by A, mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

N SWITCH CIRCUIT

— Indicates + B (bias).
- Indicates - B (bias).
~ Indicates the flow of the playback signal.
~ Indicates the flow of the recording signal.
~ The "C" (C702, Q701, Q702, D701, MR701, L701 ~ 708, CAPH701 ~ 703, CYLH701 ~ 703" parts are not supplied separately and are thus not found on the replacement parts list.
